

Instructions for executing Task 1B

1. When you extract "Task 1.zip", you should see a folder named "task1".
2. Navigate to the folder using the command line and run the following command:
 - a. `python queries.py`
3. All the 6 queries are executed the moment you run the command and the result will be displayed on the screen.
4. The application is by default connecting to `fitness_826006434` database on `34.233.78.56`. The database will originally have 3 entries.
5. WQ1 adds 6 entries to the database.
6. WQ2 updates one of the original entries.
7. RQ1 gives the number of entries in the database.
8. RQ2 retrieves the employees who are active.
9. RQ3 retrieves the employees with `stepGoal` greater than 5000.
10. RQ4 sums up the total for each entry in the `activityDuration` for each employee and displays it.
11. All the code for the same can be found in `queries.pys`
